

# Risky Driving in Canada: Public Opinion Survey on Road Safety

Brian Jonah, CCMTA  
Ottawa, Ontario  
May 29, 2015

# Purpose of survey

- CCMTA wanted to monitor variety of indicators of road safety to assess progress on Road Safety Strategy 2015.
- Some indicators are already being monitored by observational surveys (e.g., distracted driving), coroner data (e.g., fatally injured drivers who were drinking or using drugs) or collision data (e.g., belt use by fatally injured occupants, speeding).
- Current survey addresses some of these indicators as well as others such as aggressive driving and driving while tired.
- Future surveys may provide information on progress (i.e., reduction in risky driving).

# Survey methodology

- Survey was conducted by telephone in June 2014 using both land-line and mobile phones.
- Quota sampling ensured all ages and genders were represented appropriately.
- Sample was stratified by region (BC, AB, SK/MB, ON, QC, Atlantic, North).
- Only licensed drivers who had driven in last 30 days were interviewed.
- Total of 3,888 respondents completed survey with response rate of 25%.

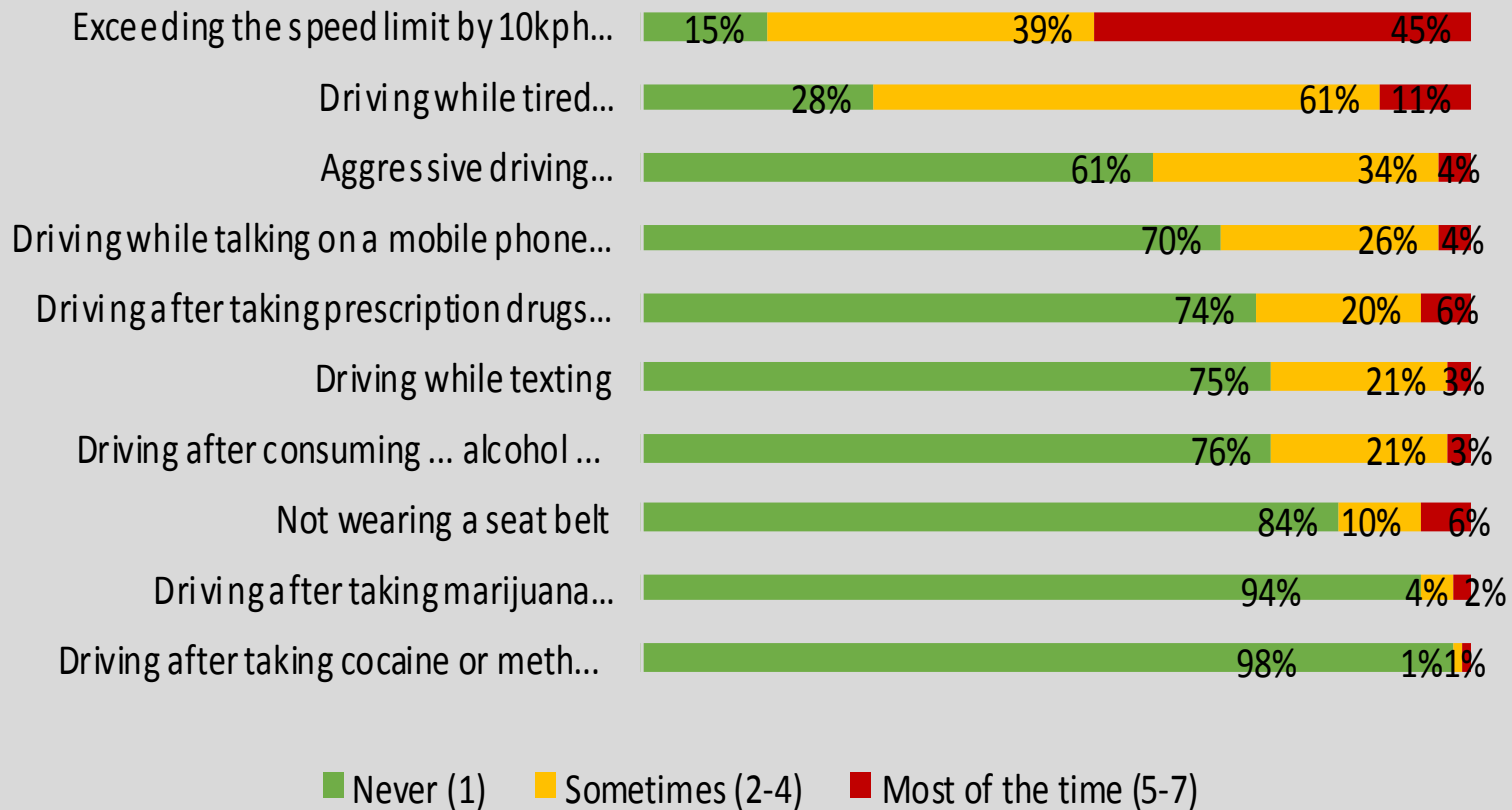

# Survey questionnaire

- Reported risky driving behaviours.
- Perceived change in other drivers' behaviour in past 5 years.
- Perceived danger of driving behaviours.
- Perceived impairment of driving by alcohol and other drugs.
- Perceived likelihood of being caught by police for impaired driving.

- Sample was weighted by number of licensed drivers in each region to obtain national estimates.
- Results are presented by age and gender groups.
- Driving behaviours were correlated.
- Multiple regressions were conducted to determine what variables predict self-reported risky driving behaviour.

# Self-reported risky driving behaviours

## Self-Reported Dangerous Driving Behaviours Overall Summary (N=3,888)

# Driving behaviour by age (% sometimes)

CANADA	AGE					
Sample size	235	251	697	1,489	658	558
	16-20	21-24	25-34	35-54	55-64	65+
Exceeding speed limit by 10kph on highway	84	90	89	88	81	72
Driving while tired	75	79	79	76	70	54
Aggressive driving (e.g., weaving in traffic, following too close)	49	59	49	37	34	22
Driving while talking on hand-held mobile phone	41	48	45	31	19	9
Driving after taking prescript. drugs such as pain relievers	22	20	19	29	27	26

# Driving behaviour by age (% sometimes)

Correlation of Driving Behaviours	Driving while texting	Driving while talking on phone	Driving after taking cocaine	Aggressive driving	Exceed speed limit by 10kph	Not wearing seat belt	Driving after 2+ drinks	Driving while tired	Driving after taking cannabis	Driving after taking medication
Driving while texting	1									
Driving while talking on phone	.538	1								
Driving after taking drugs such as cocaine	.275	.220	1							
Aggressive driving	.316	.272	.207	1						
Exceeding limit by 10kph	.244	.248	.044	.294	1					
Not wearing belt	.159	.215	.231	.157	.084	1				
Driving after 2+ drinks	.255	.210	.302	.209	.191	.138	1			
Driving tired	.270	.268	.126	.282	.281	.113	.190	1		
Driving after taking cannabis	.217	.202	.460	.208	.110	.185	.267	.113	1	
Driving after taking prescrip medication	.066	.093	.188	.123	.110	.093	.135	.154	.117	1

# Predictors of driving while texting

Variable	B Coefficient	R	R Squared	R Square Change	P Value
Age	-.28	.32	.10	.10	.000
Distance Traveled	.17	.35	.12	.02	.000
Perceived Danger of Texting	-.08	.36	.13	.01	.000
Household Income	.06	.37	.13	.003	.002

# Predictors of talking on phone

Variable	B Coefficient	R	R Squared	R Square Change	P Value
Perceived Danger of Talking	-.21	.25	.06	.06	.000
Age	-.18	.31	.10	.04	.000
Distance Traveled	.15	.34	.12	.02	.000
Household Income	.06	.35	.12	.003	.002

# Predictors of driving after cannabis use

Variable	B Coefficient	R	R Squared	R Square Change	P Value
Perceived Danger	-.16	.30	.09	.09	.000
Cannabis Impairs Driving	-.09	.34	.12	.03	.000
Age	-.06	.35	.12	.01	.000
Gender	-.12	.36	.13	.01	.000

# Predictors of drinking and driving

Variable	B Coefficient	R	R Squared	R Square Change	P Value
Perceived Danger	-.21	.29	.08	.08	.000
Gender	-.31	.32	.10	.02	.000
Alcohol Impairs Driving	-.05	.33	.11	.01	.000
Household Income	-.04	.33	.11	.001	.03

# Predictors of speeding

Variable	B Coefficient	R	R Squared	R Square Change	P Value
Perceived Danger	-.47	.42	.18	.18	.000
Household Income	.31	.45	.21	.02	.000
Age	-.20	.47	.22	.02	.000
Distance Traveled	.11	.47	.23	.002	.000

# Predictors of aggressive driving

Variable	B Coefficient	R	R Squared	R Square Change	P Value
Perceived Danger	-.20	.22	.05	.05	.000
Age	-.16	.27	.07	.02	.000
Gender	-.28	.29	.08	.01	.000
Household Income	.11	.31	.09	.01	.000
Distance Traveled	.06	.31	.10	.01	.01

# Conclusions

- Most commonly reported risky driving behaviours were driving over speed limit, driving while tired, aggressive driving, and driving while using hand-held phones.
- Male drivers aged 21-24 were most likely to engage in risky driving.
- Driving behaviours seen to have increased most in last 5 years include texting, hand-held phone use, and driving after using cannabis.
- Driving while texting, driving after using cocaine/meth, and aggressive driving perceived to be most dangerous behaviours.

# Conclusions

- While over 80% strongly agreed that driving was impaired by alcohol and drugs like cocaine and meth only about 2/3 believed this about cannabis.
- 56% thought it was very likely that a driver impaired by alcohol would be caught by police but only 22% thought this about cannabis.
- Many of risky behaviours are correlated  $>.25$ .
- Perceived danger of risky behaviour was best predictor of risky driving followed by age, distance traveled, household income, and perceived impairment of driving by alcohol/drug.
